## Patient Experience

**M**y wife is diabetic since 2013, We are visiting TDC since 2017 and to be honest I have tried many other hospitals without satisfaction nor my Wife's sugar was getting controlled. When she was diagnosed with the diabetes her sugar was about 27.75 mmol/L or 500mg/DL which is way too high. Blood glucose levels for people without diabetes generally range between 3.5–8.0 mmol/L.

**H**owever, when living with diabetes, maintaining those levels within the target range is not always easy. She has managed to stay in the target range through lifestyle changes and proper medicines provided here at TDC free of cost as we can not afford it. which have helped her to feel fit and healthy.

**I** live in Bahawalnagar, there is no hospital for diabetes. So in short I just want to say that “ This is the First Hospital of Diabetes In Pakistan, where all facilities and treatment is available under a roof on welfare basis, I have never seen such good cooperative staff , as well as Doctors are providing good consultation and most importantly there is no Hospital in Pakistan for Diabetes which provides treatment free of cost to poor people who are unable to afford it.
